

CONVEXA

Our sign system CONVEXA features a stylish curved design with an easy-to-use insert function. The systems profiles are grooved to support a range of replaceable inserts. Sign information is updated simply by using a suction cup to grab, pull and remove the protective plastic cover from the profile frame. The insert can then easily be replaced, and the plastic cover put back in place under the profile grooves again.

The CONVEXA profiles are available in six sizes that support sign inserts in standard A-series sizes from A8 (52 mm) to A3 (297 mm).

CONVEXA can be built as multi-row signs as well as full-size signs. An ideal system for directory, elevator, entrance and room signs, nameplates, flag and desk signs.

MAIN FEATURES. Solid curved aluminium profile system. Sign information as replaceable paper, plastic, aluminium and tactile inserts. End caps available in aluminium and black or grey plastic. Suitable for indoor and outdoor signage.

OTHER FEATURES. Sign rows with vertical or horizontal curvature. Separate aluminium profiles for flag and desk sign constructions. The system is also available in white or black coated profiles.

VERTICAL OR HORIZONTAL CURVATURE.

Both full-size signs and multi-row signs can be constructed to feature vertical (top illustration) or horizontal (bottom illustration) curvature.
