

SIGNET

GUIDELINES SURFACE CARE – ALUMINIUM SIGNS

SIGNET's profile sign system is made of anodized aluminium. A complete sign consists, in addition to aluminium, of A-PET plastic and stainless metal details; such as screws and mounting devices.

To cleaning the sign surface we recommend lukewarm soapy water, and if heavy soiling; lukewarm water with washing-up liquid. After cleaning, wiped off the sign with a damp cloth to remove any cleaning chemical residues.

All parts in a SIGNET sign are recyclable. Contact your local recycling centre for more information regarding waste sorting and recycling regulations.
