

MAGNETIC

Our sign system MAGNETIC features SIGNET's easy-to-use magnetic click function. Sign information is replaced or updated simply by using a suction cup to grab, pull and release the sign rows out of the sign frame's magnetic grip. The sign rows – our double-sided profiles with one grooved and one smooth/flat surface side – enable sign solutions for both replaceable inserts and direct text/graphic vinyl applications.

MAGNETIC is a robust and practical sign system; a perfect choice for all size directory and information signs that require accessible information update.

MAIN FEATURES. Flat sign system with double-sided aluminium profiles and magnetic click function. Sign information as replaceable paper, plastic, aluminium and tactile inserts, and direct text/graphic vinyl applications. Suitable for indoor and outdoor signage.

OTHER FEATURES. The system is also available in white or black coated profiles.

EASY INFORMATION UPDATE WITH MAGNETIC CLICK.

Attach a suction cup at the far end of the sign row, pull out to release it from the magnetic grip. Reattach the sign row by letting the sign frame's magnet "grab" the panel back in place.
