

SLIDE-DOWN

With our sign system SLIDE-DOWN custom signs are created by sliding the sign row profiles into the sign construction's frame. The system's arrangeable sign rows – our double-sided profiles with one grooved and one smooth/flat surface side – enable sign solutions for both replaceable inserts and direct text/graphic vinyl applications.

SLIDE-DOWN is a versatile, durable and practical sign system, an optimal choice for directory, information, floor and room signs, and nameplates.

MAIN FEATURES. Flat sign system with double-sided aluminium profiles and slide-down construction. Sign information as replaceable paper, plastic, aluminium and tactile inserts, and direct text/graphic vinyl applications. Suitable for indoor and outdoor signage.

OTHER FEATURES. The slide-down construction's side profiles are available in three sizes: 7, 12 and 25 mm. The system is also available in gold coloured profiles.

REARRANGE, REPLACE & UPDATE.
Remove the top end caps and slide the sign rows up and out of the sign frame. Replace sign rows, update information, or rearrange rows, and then slide them back down the grooves of the side profile frame and reattach the end caps.
