

SLIM

SIGNET's super thin flat sign system SLIM combines modern design with flexible information display. The system's double-sided profiles, with one grooved and one smooth/flat surface side, enable sign solutions for both replaceable inserts and direct text/graphic vinyl applications.

SLIM is available in profile sizes that support sign inserts in standard A-series sizes A6, A5, A4 (and possibility of tailored construction of A3), in addition to a wide range of profiles for custom sign solutions.

The system is versatile, durable and functional; a great fit for directory, floor and room signs, nameplates and all kinds of information and bulletin boards.

MAIN FEATURES. Flat sign system with double-sided aluminium profiles. Sign information as replaceable paper, plastic, aluminium and tactile inserts and direct text/graphic vinyl applications. Suitable for indoor and outdoor signage.

OTHER FEATURES. Separate aluminium profile for flag sign constructions and complete profile for desk signs. The system is also available in white or black coated profiles.

EASY INFORMATION UPDATE.

With the help of a suction cup grab the plastic insert at the far end and pull slightly to release it from the profile grooves, then pull sideways to slide the insert out of the panel row.
